

**EmperorTech Global Solutions** is an ICT Consultancy firm registered with the corporate Affairs commission: We are into Website Design and Development, Graphics Design, Mobile Application Design and Development, Computer Training in Software Development and Computer Appreciation and Application.

Our product is called **LATI-Agro**. LATI is a Nupe word meaning farm. Niger State is blessed with vast arable land. Farming has thus become the most dominant occupation of the people in Niger State. But a major challenge face by these farmers is lack of visibility and access to the market. In addition to this challenge is post-harvest losses. Therefore, **LATI-Agro** is a mobile application with a website that is aimed to connect the farmers directly to their potential market across Niger State and the neighboring States. This will solve the challenge of Post-harvest losses, and inflation due to the high cost of food by the middlemen. Also, provides the government with a one-stop platform for price regulation and a medium of reaching out to farmers for government interventions.
